

MaxQDALending License

- Activate with network license

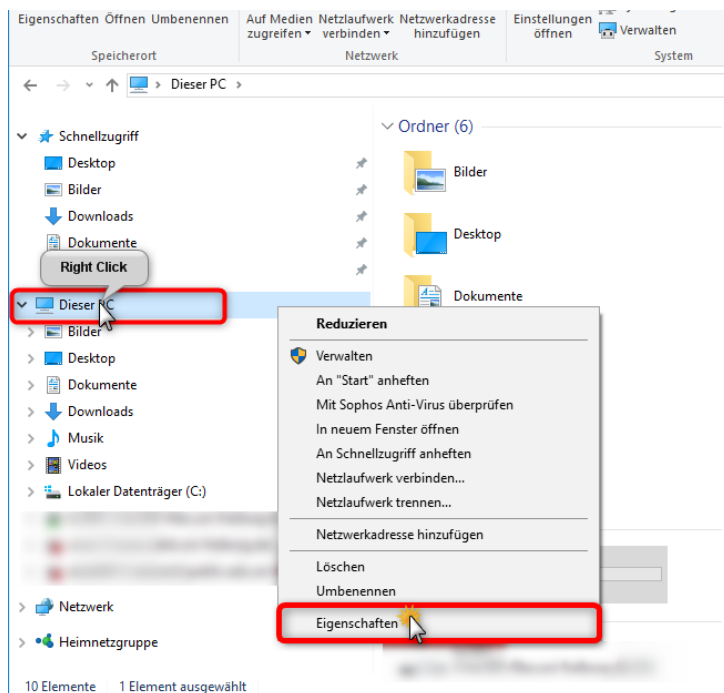

The MAXQDA Lending Licenses are currently only available as network licenses. Since a small number of licenses are available, they have to be restricted in access.

In order to gain access to the license server, your computer must be identified as "authorized".

So far, the most practicable solution has been identification by device name. Therefore the license administrator also needs the device name of the computer that should have access to the network license.

You can find out and change the name of your computer as follows:

Windows

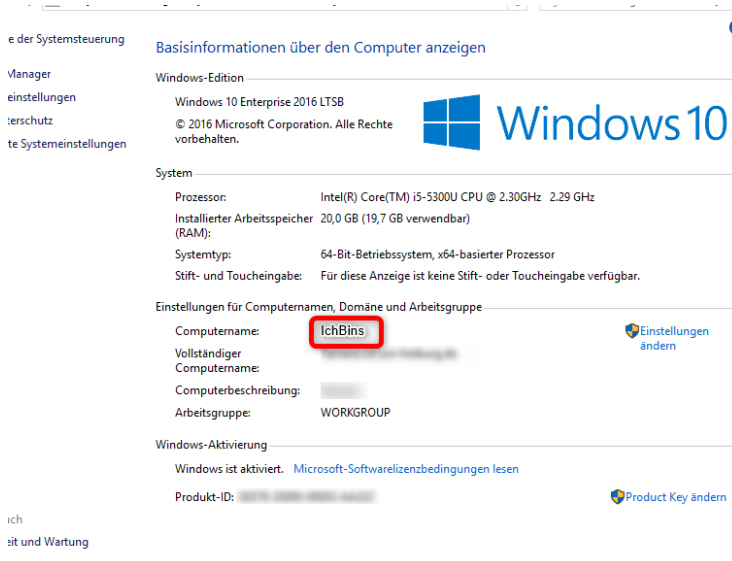

Start the Explorer (not the browser).right click on 'This PC' in the left list.

Then click on 'Properties'

(Alternatively you can (with Windows 10) also click with the right mouse button on the Windows icon in the lower left corner and click 'System')

A window is opening...

...Here you can read the current device name under 'Computer name'.

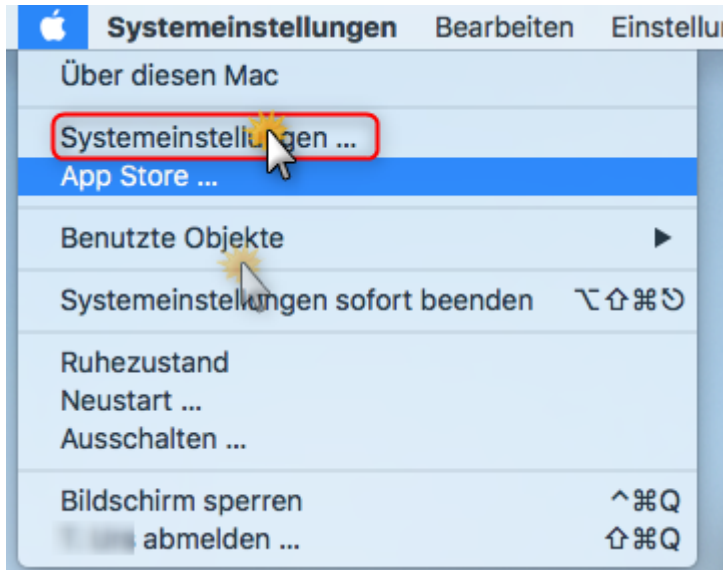

If you want to edit it, click on 'Change settings'.

No matter if you change it or keep it: To access the license server, you must report the valid device name...

MaxQDA Lending License

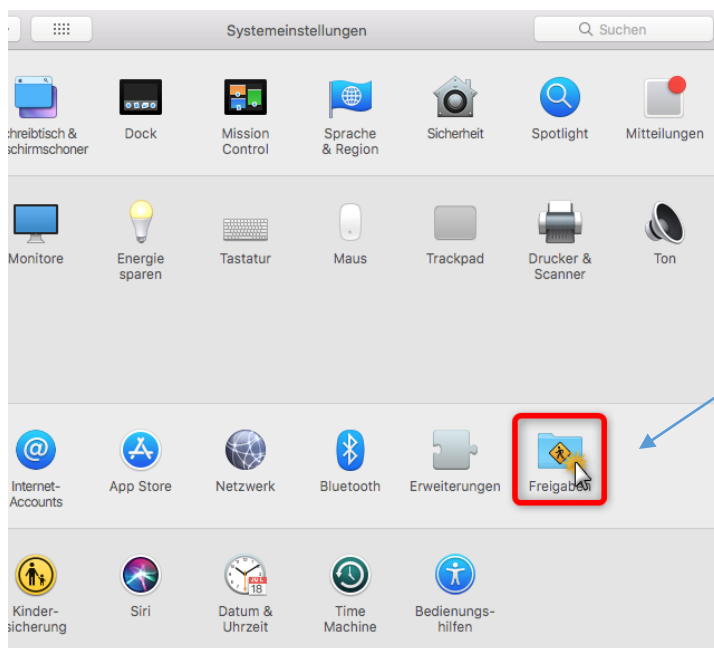

- Activate with network license

Mac OS

Click on the apple icon and then on 'System Preferences'.

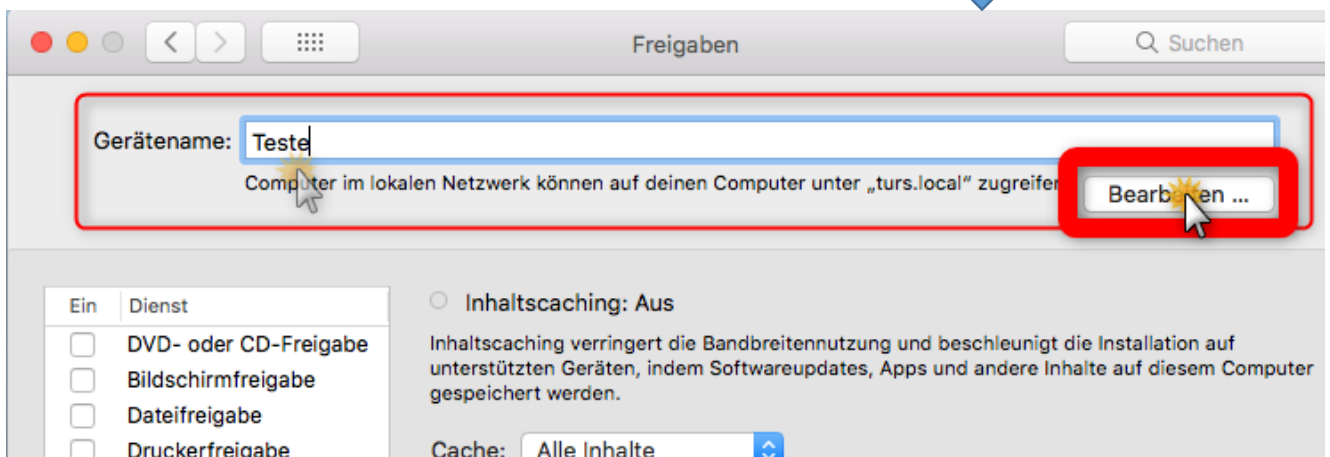

A window opens.

Click here on 'Sharing'.

Here you can read the device name and, if you click on 'Edit', change the name.

The license administrator needs the valid device name, which is 'Teste' in the example.

MaxQDA Lending License

- Activate with network license

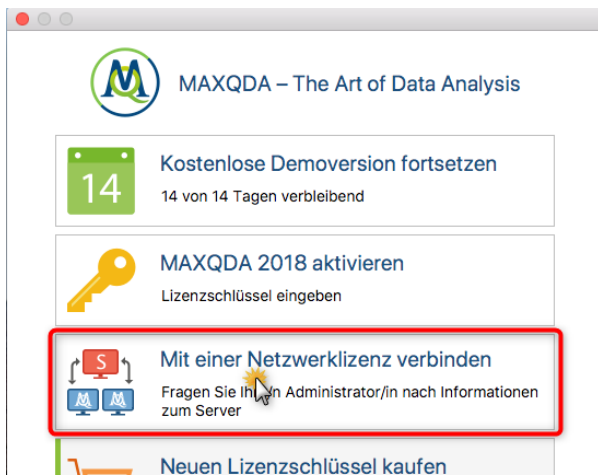

How do I activate the MAXQDA License via license server?

1. Wenn Sie MAXQDA neu installieren:

1. Download MAXQDA to a user computer and perform the installation.

Downloadlink for Windows: www.maxqda.de/download/MAXQDA2020_Setup.msi

Downloadlink for macOS: www.maxqda.de/download/MAXQDA2020.dmg

2. Start MAXQDA after the installation and select in the activation dialog the option 'Mit einer Netzwerklizenz verbinden' ('Connect with a network license').

Click on 'Mit einer Netzwerklizenz verbinden'.

A window opens...

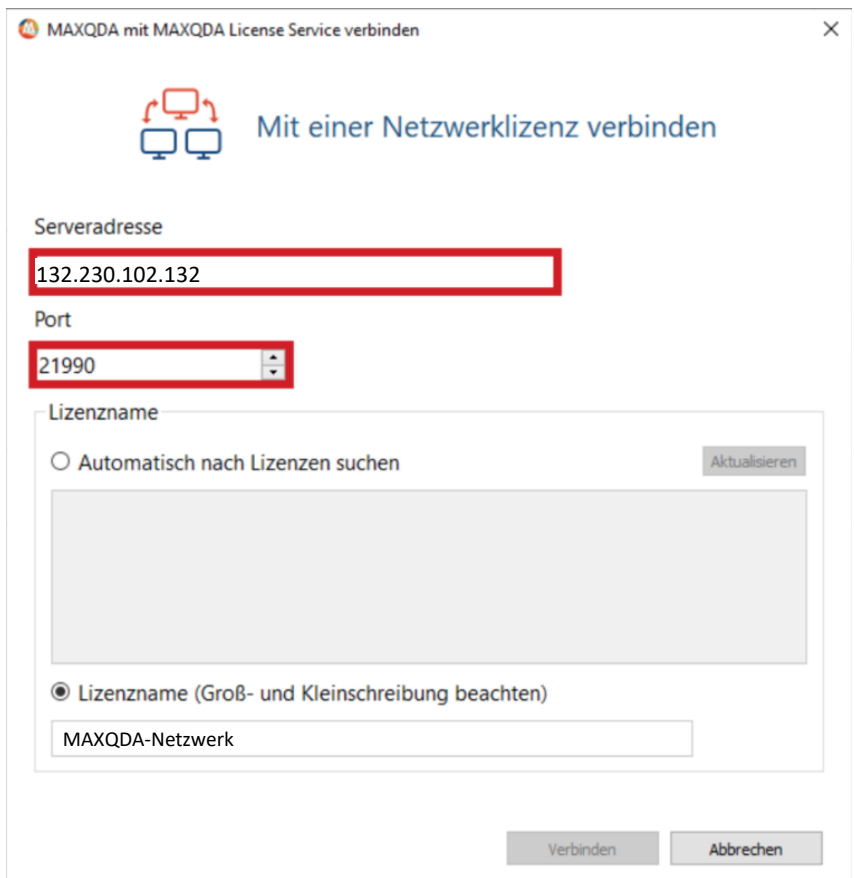

3. In the following dialog, enter the server address 132.230.102.132 and the port 21990 for the MAXQDA Netlic Service.

4. You can now automatically display all available licenses of the MAXQDA Netlic Service. Then select the desired license based on the license name (MAXQDA-Netzwerk). Alternatively, you can also enter the license name manually.

5. Then click on "Connect" to obtain the license.

6. The client device is now ready to use the license.

7. The data entered, i.e. server address, port and license name, will be recorded in a configuration file so that the selected license will be obtained automatically the next time MAXQDA is started, if possible.

MaxQDA Lending License

- Activate with network license

2. If you have used MAXQDA with a trial license:

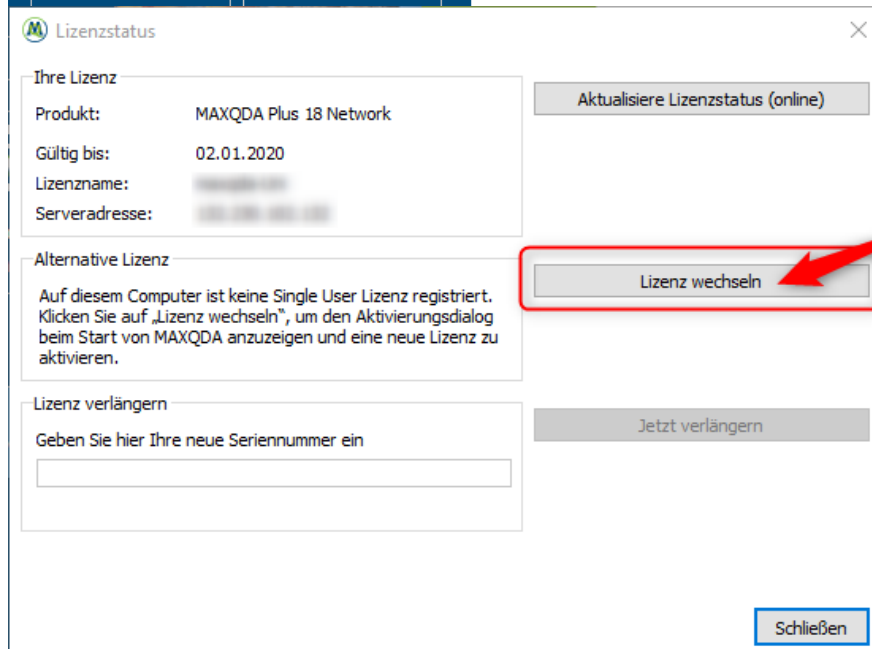

27. Feb -
1. Mär 201
in Berlin

Click once the small green sign with the exclamation mark in the upper left corner.

MAXQDA - TI

A smaller windows opens...

Click here 'Lizenz wechseln' or 'Change License'

The window from above should open. Then enter the data of the server as in 1. (see above):

Enter here under server address:

132.230.102.132

And under license name, type

MAXQDA-Netzwerk
